FARM PRODUCTION, FARM DISPOSITION, AND VALUE OF PRINCIPAL CROPS 1/
1942-43

This is one of a series of reports relating to farm disposition of crops, livestock and livestock products. This report includes estimates for grains, hay, seeds, fruits and nuts, and some other commodities. Estimates for cotton and cotton seed were published with the April 28 cotton report; those for tobacco, sugar beets and sugarcane for sugar will be published in the General Crop Report on May 10.

The production estimates shown in this report are the same as published in the December 1943 Annual Summary of Crop Production, except for some fruits, in which instances footnotes indicate revisions since that time. Estimates of farm disposition relate to that portion of the crop used or to be used for the designated purpose and do not include purchases for such purposes. Portions of crops shown as fed to livestock represent quantities fed on farms which produced the crop in the given year and do not represent total quantities of crops ultimately used for livestock feeding. The producer feeds varying amounts of certain crops on the farm where grown and reports sales, actual or expected, regardless of the final use that may be made of such sales off the farm. In the ^{1942 and} 1943 crop years considerable quantities of wheat were sold to farmers by the Commodity Credit Corporation for use as livestock feed. To the extent that this wheat was purchased and fed by wheat growers, it appears in the estimates of wheat fed. For the principal feed crops the grain used for feed and seed is a residual and (production less household use and sales) does not include grain purchased for such purposes. Corn shown as "sold" from farms may later be used for feed or seed on other farms in the same State or other States.

1/ This report was prepared by the staff of the Crop Reporting Board. Much of the basic data was gathered by the Agricultural Statisticians in charge of the field offices. The report is a joint product of the field and Washington office personnel. The estimates for grains and hay were prepared by Charles E. Burkhead, Anna P. Kelly, J. H. Peters, H. R. Walker and Charles G. Carpenter; for fruits and nuts, by Reginald Royston, D. C. Palmer, E. O. Schlotzhauer, P. F. Keisler and C. O. Parker; for grass seeds, by G. C. Edler and T. J. Kuzolka; for peanuts, John A. Hicks and John F. Marsh. Season average prices were prepared by Roger E. Hale, J. E. Wissinger, Lawrence E. Cron and Ralph S. Woodruff.

For some crops such as wheat and rye, total seed requirements are shown as well as the amount of such seed which is home grown; i.e., used on farms where produced. The difference between total seed requirements and the amount used for seed on farms where grown is included in "sales" made by other farmers in the same State or other States.

The season average prices for 1942 crops are, in most cases, the estimated mid-month prices (published currently in "Agricultural Prices") weighted by the estimated quantities sold in each month of the crop marketing season. Prices for the 1943 crops are based on mid-month prices for the months from the beginning of the crop marketing season through March 1944. Season average prices for popcorn, broomcorn, sugarcane for sirup, maple products, hops, many of the fruit and nut crops and most of the grass and cover crop seeds, are based primarily on special price surveys. For some crops, such as sugarcane sirup (except Louisiana), sorghum sirup and velvetbeans, prices are season average prices as reported December 1.

The value of sales and value of home consumption for each crop represents the designated quantity multiplied by the season average price per unit of measure. In like manner, the value of production is obtained by applying the season average price of the portion sold to total production, or production having value, as the case may be. These value estimates should not be confused with cash income which relates to the calendar year, irrespective of the year of production.

For a complete index of the contents of this report see page 62.

Revised estimates of farm disposition for a series of years are being released in separate reports for individual crops or groups of crops. These reports have already been published for peanuts, apples, pears, grapes, and cherries.

The estimates of farm disposition of crops are based upon data collected from many sources. Sales have been checked by enumerations, such as reports of processors, or by records of handlings, such as shipments by truck, railroads, and steamships. Many items of farm use are estimated from returns for individual farms from special disposition inquiries relating to individual crops. In these inquiries farmers were asked to report the quantities of the crops produced and the quantities used on the farm for each purpose. For some crops, sales are estimated directly by asking farmers to report quantities produced and quantities sold or to be sold.

1/ Preliminary.

2/ Revised since December 1943.

3/ Equivalent per unit returns for bulk fruit at the first delivery point.

The crop marketing seasons are as follows: Apricots, fresh, May 1 to Aug. 31; canned June 1 to May 31; dried, July 1 to June 30. Figs, fresh, June 1 to Oct. 31; canned and dried, Sept. 1 to Aug. 31. Almonds, Aug. 1 to July 31. Olives, walnuts, filberts, and Calif. avocados, Oct. 1 to Sept. 30. Florida avocados, July 1 to June 30. Florida pineapples, May 1 to July 31. The values shown are for the marketing season or crop year, and should not be confused with calendar year income.

FARM PRODUCTION, FARM DISPOSITION, AND VALUE OF PRINCIPAL CROPS 1/
1943-44

This is one of the annual reports relating to farm disposition of crops, livestock, and livestock products. This report includes estimates of grains, hay, seeds, potatoes, fruits and nuts, and some other commodities. Estimates for cotton and cottonseed were published with the April 28 cotton report; those for tobacco, sugar beets and sugarcane for sugar will be published in the General Crop Report to be released on May 10. The reports on chickens and eggs and turkeys were published in March, milk on April 16 and meat animals on April 27, 1945.

The production estimates for 1943 and 1944 shown in this report are the same as published in the December 1944 Annual Summary of Crop Production, except for some fruits in which instances footnotes indicate revisions since that time. Estimates of farm disposition relate to portions of the crop used or to be used for the designated purposes and do not include purchases for such purposes. Portions of crops shown as fed to livestock represent quantities fed on farms which produced the crop in the given year and do not represent total quantities of crops ultimately used for livestock feeding. The producer feeds varying amounts of certain crops on the farm where the crop is grown and reports sales, actual or expected, regardless of the final use that may be made of such sales off the farm. In the 1943 and to a lesser extent the 1944 crop years considerable quantities of wheat were sold to farmers by the Commodity Credit Corporation for use as livestock feed. To the extent that such wheat was placed under loan on farms where produced and later redeemed and fed, it appears in the estimates of wheat fed. For the principal feed crops the grain used for feed and seed is a residual (production less household use and sales) and does not include grain purchased for such purposes. Corn shown as "sold" from farms may later be used for feed or seed on other farms in the same State or other States.

1/ This report was prepared by the staff of the Crop Reporting Board under the direction of Paul L. Koenig, Chairman. Much of the basic data was gathered by the Agricultural Statisticians in charge of the field offices. The report is a joint product of the field and Washington office personnel. The estimates for grains and hay were prepared by C. E. Burkhead, Anna P. Kelly, J. H. Peters, H. R. Walker, C. G. Carpenter, and R. F. Gurtz; for potatoes, fruits and nuts, by Reginald Royston, C. D. Palmer, E. O. Schlotzhauer, George S. Strong, P. F. Kiesler, and C. O. Parker; for grass seeds, by G. C. Edler and T. J. Kuzelka; for peanuts, John A. Hicks and John F. Marsh. Season average prices were prepared by Roger F. Hale, Lawrence E. Cron, and Ralph S. Woodruff.

For some crops such as wheat and rye, total seed requirements are shown as well as the amount of such seed which is home grown; i.e., used on farms where actually produced. The difference between total seed requirements and the amount used for seed on farms where grown is included in "sales" made by other farmers in the same State or other States.

The season average prices for 1943 crops are, in most cases, the estimated mid-month prices (published currently in "Agricultural Prices") weighted by the estimated quantities sold in each month of the crop marketing season. The marketing season is shown below the tables for each crop. Prices for the 1944 crops are based on mid-month prices for the months from the beginning of the crop marketing season through March 1945. Season average prices for popcorn, broomcorn, sugarcane for sirup, maple products, hops, many of the fruit and nut crops and most of the grass and cover crop seeds, are based primarily on special price surveys. For some crops, such as sugarcane sirup (except Louisiana), sorghum sirup and velvetbeans, prices are season average prices as reported December 1 of each year.

The value of sales and value of home consumption for each crop represents the designated quantity used for each purpose multiplied by the season average price per unit of measure. In like manner, the value of production is obtained by applying the season average price of the portion sold to total production, or production having value, as the case may be. These value estimates should not be confused with cash income which relates to the calendar year, irrespective of the year of production.

For a complete index of the contents of this report see the inside front cover.

Revised estimates of farm disposition (including values for many items) for a series of years are being released in separate reports for individual crops or groups of crops. These reports have already been published for peanuts, apples, pears, grapes, cherries, popcorn, corn, oats, barley, rye, buckwheat, rice, hay, sorghum grain, dry beans, and flaxseed.

The estimates of farm disposition of crops are based upon data collected from many sources. Sales have been checked by enumerations, such as reports of processors, or by records of handlings, such as shipments by truck, railroads, and steamships. Many items of farm use are estimated from returns for individual farms from special disposition inquiries relating to individual crops. In these inquiries farmers were asked to report the quantities of the crops produced and the quantities used on the farm for each purpose. For some crops, sales are estimated directly by asking farmers to report quantities produced and quantities sold or to be sold.

1/Estimates for the commercial crop relate to apples produced in the commercial apple areas of each State, and include fruit produced for sale to commercial processors as well as for sale for fresh consumption. The crop marketing season is June 1 to May 31 for N.J., Ind., Ill., Mo., N.Mex., and all South Atlantic and South Central States; July 1 to June 30 for all other States. The values shown are for the marketing season or crop year, and should not be confused with calendar year.

FARM PRODUCTION, FARM DISPOSITION, AND VALUE OF PRINCIPAL CROPS 1/
1944-45

This is one in a series of annual reports relating to farm disposition of crops, livestock, and livestock products. This report includes estimates of grains, hay, seeds, potatoes, fruits and nuts, and some other commodities. Estimates for cotton and cottonseed were published with the April 26 cotton report; those for tobacco, sugar beets and sugarcane for sugar will be published in the General Crop Report to be released on May 10. The reports on chickens and eggs and turkeys were published in March, milk on April 15 and meat animals on April 26, 1945.

The production estimates for 1944 and 1945 shown in this report are the same as published in the December 1945 Annual Summary of Crop Production, except for citrus fruits and maple products. Estimates of farm disposition relate to portions of the crop used or to be used for the designated purposes and do not include purchases from others for such purposes. Portions of crops shown as fed to livestock represent quantities fed on farms which produced the crop in the given year and do not represent total quantities of crops ultimately used for livestock feeding. Farmers feed considerable quantities of certain crops on the farm where the crop is grown and report their sales, actual or expected, regardless of the final use that may be made of the quantities sold. In the 1944 crop year a considerable quantity of wheat was sold to farmers by the Commodity Credit Corporation for use as livestock food. Practically none of the 1945 crop was sold for food by the Corporation. Wheat that was placed under loan on farms where produced and later redeemed and fed, appears in the estimates of wheat fed. For the principal feed crops the grain used for feed and seed is a residual (production less household use and sales) and does not include grain purchased for such purposes. Some products shown as "sold" from farms may later be used for feed or seed on other farms in the same State or other States.

1/ This report was prepared by the staff of the Crop Reporting Board under the direction of W. F. Callander, Chairman. Much of the basic data was gathered by the Agricultural Statisticians in charge of the field offices. The report is a joint product of the field and Washington office personnel. The estimates for grains and hay were prepared by C. E. Burkhead, Anna P. Kelly, J. H. Peters, H. R. Walker, C. G. Carpentor, R. F. Gurtz, and H. G. Brown; for potatoes, fruits and nuts, by Reginald Royston, D. C. Palmer, E. O. Schlotzhauer, George B. Strong, P. F. Kiesler, and C. O. Parker; for grass seeds, by G. C. Edler and T. J. Kuzelka; for peanuts, maple products, sugarcane and sorgo sirup, John F. Marsh and John C. Scholl. Season average prices were prepared by Roger F. Hale, T. C. M. Robinson and L. E. Cron.

For some crops such as wheat, rye and peanuts, total seed requirements are shown as well as the amount of such seed which is home grown; i.e., used on farms where actually produced. The difference between total seed requirements and the amount used for seed on farms where grown is included in "sales" made by other farmers in the same State or other States.

The season average prices for 1944 crops are, in most cases, the estimated mid-month prices (published currently in "Agricultural Prices") weighted by the estimated quantities sold in each month of the crop marketing season. The marketing season is shown below the tables for each crop. Prices for the 1945 crops are based on mid-month prices for the months from the beginning of the crop marketing season through March 1946. Season average prices for popcorn, broomcorn, sugarcane for sirup, maple products, hops, many of the fruit and nut crops and most of the grass and cover crop seeds, are based primarily on special price surveys. For some crops, such as sugarcane sirup (except Louisiana), sorghum sirup and velvetbeans, prices are season average prices as reported December 1 of each year.

The value of sales and value of home consumption for each crop represents the designated quantity used for each purpose multiplied by the season average price per unit of measure. In like manner, the value of production is obtained by applying the season average price of the portion sold to total production, or production having value, as the case may be. These value estimates should not be confused with cash income which relates to the calendar year, irrespective of the year of production. The 1945 value estimates for wheat and corn do not include an allowance for the bonus of 30 cents per bushel for quantities delivered or to be delivered under the certificate plan announced by the Secretary, which became effective at 12:01 A.M., April 22, 1946.

For a complete index of the contents of this report see the inside front cover.

The estimates of farm disposition of crops are based upon data collected from many sources. Sales have been checked by enumerations, such as reports of processors, or by records of handlings, such as shipments by truck, railroads, and steamships. Many items of farm use are estimated from returns for individual farms from special disposition inquiries relating to individual crops. In these inquiries farmers are asked to report the quantities of the crops produced and the quantities used on the farm for each purpose. For some crops, sales are estimated directly by asking farmers to report quantities produced and quantities sold or to be sold.

1/ Preliminary.

2/ The difference between total seed and seed saved on farms where grown represents potatoes purchased for seed and is duplicated under "sold."

3/ Consists of potatoes sold and to be sold for food, seed, processing, and all purchases by the Government under support programs.

The beginning of the crop-marketing season varies between States from December 1 preceding the year shown for Florida and Texas to August 1 of the year shown for certain Northern States. The marketing season comprises 12 months in all States except California, which has a 14-month season beginning April 1 of the year shown.

FARM PRODUCTION, FARM DISPOSITION, AND VALUE OF PRINCIPAL CROPS 1/
1945-46

This is one in a series of annual reports relating to farm disposition of crops, livestock, and livestock products. This report includes estimates of grains, hay, seeds, potatoes, fruits and nuts, and some other commodities. Estimates for cotton and cottonseed were published with the April 23 cotton report; those for tobacco, sugar beets and sugarcane for sugar are published in the General Crop Report released on May 9. The reports on chickens and eggs and turkeys were published in March, milk, and meat animals in April.

8554 Lomonte
The production estimates for 1945 and 1946 shown in this report are the same as published in the December 1946 Annual Summary of Crop Production, except for citrus fruits. Estimates of farm disposition relate to portions of the crop used or to be used for the designated purposes and do not include purchases by farmers from others for such purposes. Portions of crops shown as fed to livestock represent quantities fed on the farms that produced the crop in the given year and do not represent total quantities of crops ultimately used for livestock feeding. Farmers feed considerable quantities of certain crops on the farms where the crop is grown and they report their sales, actual or expected, regardless of the final use that may be made of the quantities sold. For the principal feed crops, the grain used for feed and seed is a residual (production less household use and sales) and does not include grain purchased for such purposes. Some products shown as "sold" from farms may later be used for feed or seed on other farms in the same State or other States.

For some crops such as wheat, rye and peanuts, total seed requirements are shown as well as the amount of such seed which is home grown; i.e., used on farms where actually produced. The difference between total seed requirements and the amount used for seed on farms where grown is included in "sales" made by other farmers, in the same State or other States.

The season average prices for 1945 crops are, in most cases, the estimated mid-month prices (published currently in "Agricultural Prices") weighted by the estimated quantities sold in each month of the crop marketing season. The marketing season is shown below the tables for each crop. Prices for the 1946 crops are based on mid-month prices for the months from the beginning of the crop marketing season through March 1947. Season average prices for popcorn, broomcorn, sugarcane for sirup, maple products, hops, many of the fruit and nut crops and most of the grass and cover crop seeds, are based primarily on special surveys. For some crops, such as sugarcane sirup (except Louisiana), sorghum sirup and velvetbeans, prices are season average prices as reported December 1 of each year.

The value of sales and value of home consumption for each crop represents the designated quantity used for each purpose multiplied by the season average price per unit of measure. In like manner, the value of production is obtained by applying the season average price of the portion sold to total production, or production having value, as the case may be. These value estimates should not be confused with cash income which relates to the calendar year, irrespective of the year of production. The 1945 value estimates for wheat and corn do not include an allowance for the bonus of 30 cents per bushel for quantities delivered under the certificate plan announced by the Secretary. This plan became effective on April 22, 1946 and officially ended May 11, 1946 for corn and May 25, 1946 for wheat.

1945-46
The estimates of farm disposition of crops are based upon data collected from many sources. Wherever possible sales have been checked by enumerations, such as reports of processors, or by records of handlings, such as shipments by truck, railroads, and steamships. Many items of farm use are estimated from returns for individual farms from special disposition inquiries relating to individual crops. In these inquiries farmers are asked to report the quantities of the crops produced and the quantities used on the farm for each purpose. For some crops, sales are estimated directly by asking farmers to report quantities produced and quantities sold and to be sold.

1/ The estimates for grains, hay, peanuts, maple products, sugarcane and sorgho sirup were prepared by J. A. Ewing, J. H. Peters, Anna P. Kelly, R. F. Gurtz, H. R. Walker, C. G. Carpenter, G. C. Edler, T. J. Kuzelka, J. A. Hicks, J. F. Marsh, and J. C. Scholl, under the general direction of C. E. Burkhead, Head, Division of Field Crop Statistics; potatoes, fruits and nuts by Irvin Holmes, G. B. Strong, C. O. Parker, C. D. Palmer, E. O. Schlotzhauer, and P. F. Kiesler under the general direction of Reginald Royston, Head, Division of Fruit and Vegetable Statistics. Season average prices were prepared by G. D. Harrell, D. D. Pittman, R. E. Johnson, and Marjorie Miller, under the general direction of B. R. Stauber, Head, Division of Agricultural Price Statistics. Most of the basic data were gathered by the Agricultural Statisticians in Charge of field offices.

WHEAT: PRODUCTION, FARM DISPOSITION, AND VALUE, BY STATES, 1945 CROP

The crop marketing season is June 1 to May 31 for Kansas, North Carolina, South Carolina, Georgia, Tennessee, Alabama, Mississippi, Arkansas, Oklahoma, Texas, New Mexico, Arizona, and California; July 1 to June 30 for all other States. The values shown are for the marketing season or crop year and should not be confused with calendar year income.

1/ Preliminary. 2/ The difference between total seed and seed saved on farms where grown represents potatoes purchased for seed and is duplicated under "sold". 3/ Consists of potatoes sold and to be sold for food, seed, processing, and all purchases by the Government under support programs. 4/ Production and sales estimates include 125,000 bushels in Va. and 1,379,000 bushels in W. Car. unharvested but purchased by Government under price support programs.

Note: The beginning of the crop-marketing season varies between States from December 1 preceding the year shown for Florida and Texas to August 1 of the year shown for certain Northern States. The marketing season comprises 12 months in all States except Calif., which has a 14-month season beginning April 1 of the year shown.

1/ The difference between total seed and used for seed on farms where grown represents sweetpotatoes purchased for seed and is duplicated under quantities "sold". 2/ Preliminary.

The crop marketing season is June 1 to May 31 in Ga., Fla., and Ala.; July 1 to June 30 in Kans., Del., Md., Va., N.C., S.C., Tenn., Miss., La., Okla., Tex., and Calif.; and August 1 to July 31 in all other States. The values shown are for the marketing season or crop year and should not be confused with calendar year income.

FARM PRODUCTION, FARM DISPOSITION, AND VALUE OF
FIELD AND SEED CROPS, 1947 AND 1948

Farm disposition of crops, livestock and livestock products is covered each year in a series of reports. Estimates for grains, hay, seeds, potatoes and a few other commodities are presented in this report. Estimates for fruits and tree nuts were published in January 1949. Estimates for cotton and cottonseed appear with the Cotton Report of May 6; those for tobacco, sugar beets and sugarcane for sugar appear in the issue of Crop Production dated May 10, 1949. Reports covering farm disposition of chickens and eggs and of turkeys were issued in March, for milk and for meat animals in April.

This report shows estimated sales from 1947 and 1948 crops and portions of production used or to be used for designated purposes on farms where grown. Total estimated production is the same as previously published in the December 1948 Annual Summary of Crop Production. Quantities shown as fed to livestock and poultry represent that part of each crop which was fed only on the farms that produced the crop in a given year. These quantities do not represent total quantities of the commodities ultimately used for livestock feeding. Quantities of principal feed crops sold, and used in farm households if any, are estimated directly. Therefore, the quantity estimated for feed and seed is the residual (production less household use and sales); grain purchased for feed and seed does not enter into these estimates. Some of the products shown as "sold" from farms are used for feed or seed on other farms in the same or other States. For certain crops total seed requirements are shown, but for some a breakdown is made between purchased and home-grown seed.

Basic data for these estimates of farm disposition are collected from many sources. Most items of farm use are estimated from an analysis of individual farm data on individual crops, as reported in responses to special disposition inquiries. In these inquiries farmers are asked to report their production of each commodity and the quantities used on their farms for each purpose. Sales of some commodities are estimated directly from survey data, in which farmers report production and sales. For certain commodities of which there is virtually no farm use, the entire production is shown as sales. Whenever possible, sales have been checked by enumerations, such as reports of processors, or by records of handlings and shipments by rail, boats and trucks.

Season average prices are, in most cases, the estimated mid-month prices received by farmers, weighted by estimated quantities sold in each month of the crop marketing season. The marketing season is shown below the table for each crop. Season average prices for popcorn, broomcorn, sugarcane for sirup, maple products, hops, and most of grass and covercrop seeds are based primarily upon special survey data. For sugarcane sirup (except Louisiana) and sorghum sirup, season average prices as reported on December 1 of each year are used. Price estimating procedure makes allowance for loans unredemmed at the end of the crop season when such loans are of significant volume.

These season average prices for quantities sold are used to evaluate quantities sold and used on farms. Value of sales is thus the unit price applied to quantity sold during the marketing year. In like manner the value of production and value of home consumption are computed by applying the season average price to the quantity produced or used. Therefore, these value estimates should not be confused with cash receipts, which relate to the calendar year, irrespective of the year of production.
